

1. There are six phases in the data life cycle, which culminate with analyze, archive, and destroy. What is the correct order of the first three phases?

1 / 1 point

- Manage, plan, capture
- Plan, capture, manage

The correct order is plan, capture, manage. The progression of the data life cycle is: plan, capture, manage, analyze, archive, and destroy.

- Manage, capture, plan
- Plan, manage, capture

2. Fill in the blank: During the _____ phase, data teams decide what kind of data is needed and who will be responsible for it.

1 / 1 point

- capture
- manage
- planning

During the planning phase, data teams decide what kind of data is needed and who will be responsible for it.

- analyze

3. A data team considers how and where data will be stored, what tools are required to safeguard it, and how to maintain it properly. What phase of the data life cycle does this scenario describe?

1 / 1 point

Manage

Considering how and where data will be stored, what tools are required to safeguard it, and how to maintain it properly occurs during the manage phase.

- Archive
- Capture
- Analyze

4. What is the term for the computer system in which organizations store their data?

1 / 1 point

Database

A database is the computer system in which organizations store their data.

- Catalog
- Cache
- Data ecosystem
